

Power BI Visuals: Some features explained.

Datavisualisation using data slicing. In Power BI it's simple to slice your data. Let's look at this example using revenue figures, sliced by year. In the upper left of the screen, you will find the data slicer. By selecting a year, the report will dynamically change and show the result set of that year. Let's see that in action!

First, we take a look at 2015:

Now as we saw, by selecting 2016, the content will change:

And finally, let's look at 2017 by simply ticking the box:
